DETAILED ACTION

Information Disclosure Statement

1. Information Disclosure Statement submitted on 7/02/04 has been considered by the examiner.

Drawings

2. Drawings filed 9/04/03 have been approved by the examiner.

Claim Objections

3. Claim 2 is objected to because of the following informalities:

Claim 2, line 3, change "contant" to -- constant --.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 7 recite a limitation of "FMI set-up" in lines 4 and 2, respectively. It is not clear in the claims what does it mean and therefore render the claims indefinite.

Claims 2-6 depend from the base claim 1 and therefore they are also indefinite.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/656,700

Art Unit: 2624

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U939.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art Figure 1 in view of Schmidt et al. (US 6,552,783 B1).

As to claims 1-8, applicant's admitted prior art discloses all the limitations except, at least one constant second lighting. However in an analogous art, Schmidt disclose an optical system for inspection of printed circuit boards including lighting system (18 in Figure 1) which includes at least one coaxial light (22, 24a-24b) and one side light to provide spectral discrimination and to provide contrast between a first surface made from the first material and a second surface made from a second different material (see abstract; Figure 1; column 2, lines 24-40). The lighting system 18 includes a plurality of diffuse lighting sources to illuminate uniformly the region being inspected. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the admitted prior art by including the lighting system as taught by Schmidt et

Art Unit: 2624

al. because such a modification will provide a good discrimination between an object to be inspected (e.g. an electrical component) and a second object (e.g. a surface of a printed circuit board in which a second object is disposed (column 2, lines 24-28).

Other prior art cited

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shinomiya (US 5,877,507) discloses an optical detection device and lighting method with varied irradiation angle in optical detection process.

Freifeld (US 6,724,489 B2) discloses a three dimensional scanning camera.

Mendleski (US 4,646,214) discloses a miniature coaxial lighting.

Boehnlein et al. (US 5,307,152) disclose a moire inspection system.

Wu et al. (US 6,040,910) disclose an optical phase-shift triangulation technique (PST) for non-contact surface profiling.

Huber et al. (US 5,612,786) disclose a contour measurement system.

Cofer et al. (US 6,841,780 B2) disclose a method and apparatus for detecting objects.

Application/Control Number: 10/656,700

7. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Kanji Patel whose telephone number is (571) 272-7454.

The examiner can normally be reached on Monday to Thursday from 8 a.m. to 6:30

p.m. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Bella, Matthew can be reached on (571) 272-7778. The fax phone number

for the organization where this application or proceeding is assigned is (571)-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
